

radiopaque particles mixed within said biocompatible matrix, said radiopaque particles having a particle size between about 120μ and 2200μ ; and liquid contrast agent.

RECEIVED
JAN 23 2002

34. The injectable composition of claim 33, wherein said biocompatible matrix and said radiopaque particles form a slurry.

OFFICE OF PETITIONS

35. The injectable composition of claim 33, wherein the mixture of said biocompatible matrix and said radiopaque particles forms a hard tissue implant material.

36. The injectable composition of claim 33, wherein said radiopaque particles have a particle size between about 350μ and 2200μ .

RECEIVED

37. The injectable composition of claim 36, further comprising: contrast particles having a particle size between about 120μ and 350μ .

radiopaque particles in said flowable matrix, said radiopaque particles having a size between about 350μ and about 2200μ so as to be individually visible during implantation.

41. (Amended) The enhanced visibility composition of claim 40, wherein said radiopaque particles have a size between about 570μ and 2200μ .

42. (New) The enhanced visibility composition of claim 40, wherein said radiopaque particles have a size between about 450μ and 1600μ .
